

Our digital controller provides intuitive prompts to program or activate your machine with the push of a button. A remote control is included with every machine for on demand activation.

when we move in... they move out.

Setting the chemical strength

Main menu item # 3 is “number of nozzles”. Enter your nozzle quantity from 5 to 120 nozzles.

Main menu item # 6 programs your chemical class setting. Refer to your operators manual for the chemical class that corresponds to the product you're using.

Now your ready to set the timer and start killing bugs automatically!

The control module has a battery back up and will remember your settings if power is lost.

Set your timer to activate one day per week or multiple days per week up to 4 times per hour.

Set your spray duration in 15 second increments up to 120 seconds. Factory default settings are 12:00AM, 6:00AM, 6:00PM and 8:00 PM for 45 seconds.

Adding the concentrated insecticide, Just unscrew the lid and pour it in.

The 128 ounce graduated container will actually hold up to 150 ounces if filled to the top. This is about 2.5 times the capacity of a 55 gallon reservoir system using 5% Pyrethrum.

Do not allow debris to enter the container. Use only clean insecticide concentrates approved by MosquitoMax.

No special caps or bottles required
