

# MosquitoMax Winterizing and De-winterizing Procedure

---

## Winterizing procedure

1. Remove the dip tube from the chemical reservoir and orient where the open end is upright (to keep fluid from dripping out).
2. Press menu and scroll to menu option 12, "Winterize System", press enter, then Spray, the system will run for 120 seconds clearing the line.
3. Turn off water at source (hose bib).
4. Press spray to continue your winterize cycle. The system will automatically stop and display "Water Low Halted"
5. Pour 1 quart of antifreeze into the mixing tank and insert dip tube directly into the mixing tank.
6. Press Spray to continue your winterize cycle. The system will run for 120 seconds or stop due to low fluid level and display "Water Low Halted".
7. Disconnect the water supply tube from the hose bib adapter and the water inlet check valve, drain then re-insert into check valve and install one of the supplied tube caps on the open end to keep debris out.
8. Remove the dip tube from the mixing tank and install the remaining ¼" tube cap to keep debris out.
9. Insert the supplied tube plug in the chemical reservoir to keep debris out.
10. Disconnect power.

## Start up procedure after winter

1. Plug unit in, press menu and scroll to option 12, "Winterize System", press enter.
2. Remove the tube cap from the dip tube (save tube cap for re-use) and Insert dip tube directly into the mixing tank.
3. Pour 1 quart vinegar directly into mixing tank.
4. Turn water on at the source (hose bib) and flush out any debris in the line.
5. Remove tube cap from water supply line, connect to the hose bib adapter and turn the water on (save tube cap for re-use).
6. Press spray, The system will run purging your nozzle circuit and dip tube from antifreeze for 120 seconds.
7. Remove the dip tube from the mixing tank and orient where the open end is upright (to keep fluid from dripping out).
8. Press spray. This will activate a cycle to clear the injection line. When the cycle ends, insert the dip tube into the chemical reservoir until it hits bottom, press menu and the "run screen" appears and all pre-programmed settings will remain.
